RC2^{PLUS}

HANDHELD RADIATION DETECTION SYSTEM

Durable and Dependable

The Basic RC2^{PLUS} automatically sets an alarm threshold over the total background count rate average upon each startup. This allows the RC2^{PLUS} to detect very low radiation levels even when hidden by shielding such as scrap metal, waste, or other dense material. The RC2^{PLUS} utilizes a large internal, high grade PVT scintillator to maximize sensitivity.

The Advanced RC2^{PLUS} utilizes both a PVT scintillator and a Geiger-Mueller tube to perform "Region Of Interest"(ROI) Analysis which allows the operator to see the distributed gamma energies in a histogram form. Once the ROI ranges are selected, a specific alarm threshold can be set for each ROI. This unique technology dramatically increases sensitivity while decreasing the adverse effects of "noise" caused by ambient background radiation. The RC2^{PLUS} provides many additional features such as Does Rate Alarm, Data Storage, and Graph Plotting.

Upgradable for Increased Flexibility

At any time the RC2^{PLUS} Basic can be easily upgraded to the RC2^{PLUS} Advanced. The RC2^{PLUS} Advanced stores operator results in a histogram record which can be downloaded via USB to RadComm's exclusive RadView software for further analysis. All reports can be saved in PDF format and archived for future reference. Remote servicing/diagnostics and potential future software updates of the RC2^{PLUS} can be achieved via an internet or network connection with RadComm's software application.

Upgradable for Radon Detection

New technology for express analyzing (< 5min) Radon concentration in air by using low energy resolution PVT plastic scintillator and high energy resolution Lanthanum Bromide inorganic scintillator as the gamma-detectors.
